Heat A1 to 65-70°C. Disperse A2 in A3 and add it to hot water, stirring until a flowing gel is obtained.

Disperse A4 in A5 and add it to the hot watery phase, stirring until a clear viscous gel is obtained.

Add A6 to the gel stirring and homogenizing.

Heat the ingredients of phase B at the temperature of 72° +/- 2° C. Keep this temperature until all the solids are melt.

Add C into phase B stirring until a homogeneous emulsion is obtained.

Add the emulsion (phase B + C) to the gel (phase A) stirring and homogenizing.

Add D to the product, mixing until homogeneous.

Heat water (E2) to 40°C, add E1 to water and stir until completely dissolved. Add the E1 solution to the product, mixing until homogeneous.

Add F as required to set the pH between 6,00 and 6,50.
