Heat all of the ingredients of phase A to a temperature of 72°C +/- 2° C mixing.

Mix the ingredients of phase B until a limpid, transparent solution is obtained.

Heat phase B to a temperature of 75° +/- 2°C

When the indicated temperatures have been reached, add phase B to phase A while stirring and homogenizing.

After the union, continue to stir and homogenize for about 10 minutes.

Cool the product to a temperature of 40°C, then add preservatives, parfum and pH regulator as much as needed to set the pH around 6,00.

Stop homogenizing and continue stirring until the emulsion reaches room temperature.
